Instructions for Mounting Base Installation

Telrad Mounting Base

TELRAD, INC.
Caldwell, ID
USA

To install the mounting base on your telescope:

Locate the position that you think will be most comfortable for you

Install temporarily using a low tack tape (such as electrical tape), large diameter tie wrap, string or other method

When you are satisfied with the position of the sight remove the backing from the foam tape, carefully align with the axis of the telescope and attach in the selected location

Once attached with the foam tape the mounting base cannot be moved. Base may also be mounted using available screw holes
